Algorithms of Late-Capitalism

Issue 2

“Embodied Surveillance”

With the global COVID-19 pandemic causing worldwide disruption to all sectors of life – solutions that track the spread of the virus by surveilling bodies and biomedical data are proving successful. In China, Israel, and South Korea governments are using smartphone apps to covertly and overtly identify, monitor, and control those infected, tracing who they've come into contact with and alerting police when prohibited movement occurs. Yet, it is worth asking to what extent these techno-political practices will remain in play after the quarantines?

The physical body has long been incorporated as computational data, from the birth of biometrics during the slave-trade to smart-vibrators that harvest your sexual data for third-party marketing. Face-recognition likewise uses individual physiology as data points that can be deployed to computationally profile and police citizenry.

Ownership over data equals control, and when the data becomes embodied, it computationally extends hegemonic power relationships. The control over bodies (female bodies, disabled bodies, non-white bodies, non-cis bodies, etc.) has entered the algorithmic era of big data surveillance.

It's easy to forget that data is not just abstract bits and spreadsheet entries.

A REMIX HISTORY OF BIOMETRIC SURVEILLANCE

characteristics.^[5] Physiological characteristics are related to the shape of the body. Examples include, but are not limited to fingerprint, palm veins, face recognition, DNA, palm print, hand geometry, iris recognition, retina and odour/scent. Behavioral characteristics are related to the pattern of behavior of a person, including but not limited to typing rhythm, gait, and voice.

The earliest form of Biometrics appeared on the scene back in the 1800's. Alphonse Bertillon, a Persian anthropologist and police desk clerk, developed a method for identifying criminals that became known as Bertillonage. Bertillonage was a form of anthropometry, a system by which measurements of the body are taken for classification and comparison purposes. Bertillon's system of anthropometry required numerous and precise measurements of the bony parts of a human's anatomy for identification. It also

biometric surveillance and draws a

link between contemporary biometric information technology and transatlantic

slavery. The diary of English planter Thomas Thistlewood, written accounts of the

state," governments and slave owners began using printing presses to create standardized forms for free papers. These forms contained place holders for the entry of specific biometric-like characteristics, such as skin color, particular markings such as scars or deformities, eye color, hair texture, height, weight, body

Our Face Recognition Nightmare Began Decades Ago. Now It's Expanding

Biometric systems used by ICE to round up migrants and separate families didn't come from nowhere. They've been built over decades by both parties.

Amazon Encourages Police to Use Untested Facial Recognition Technology

Racial Bias in Amazon Face Recognition

Right now, no one is regulating how cops use facial recognition technology, and it looks like that's just fine with Amazon.

Made in China, Exported to the World: The Surveillance State

Chinese police are expanding facial recognition sunglasses program

Governments looking into advanced surveillance, biometric tech to contain coronavirus

The coronavirus pandemic is creating a lucrative market for facial recognition manufacturers. But privacy issues need to be top of mind, tech experts warn.

Can China Now Identify Someone Using Facial Recognition Even If They're Wearing a Surgical Mask?

Edward Snowden warns 'bio-surveillance' may outlast coronavirus

Amid the panic of the COVID-19 pandemic, are we building the surveillance states of tomorrow?

New surveillance tech means you'll never be anonymous again

Forget facial recognition. Researchers around the world are creating new ways to monitor you. Lasers detecting your heartbeat and microbiome are already being developed

fingerprint recognition. The field of odor biometrics may be useful for individual authentication but is not well suited to mass surveillance - separating exactly who smells what.

use of 'menstrual surveillance'

Your vagina has been digitized. So have...

on using 360 sensors to measure the unique shape of the driver's rear end. Despite achieving a 98 per cent accuracy rate in trials,

IBM USED NYPD SURVEILLANCE FOOTAGE TO DEVELOP TECHNOLOGY THAT LETS POLICE SEARCH BY SKIN COLOR

can't wait until we all wear facial recognition-blocking masks and makeup and the cops switch to gait recognition and we all have to wear shoes with uneven soles to make every step we take unpredictable and ridiculous.

Facial Recognition Software Artists Block Facial Recognition from Tracking

By Sara Barnes on August 31, 2019

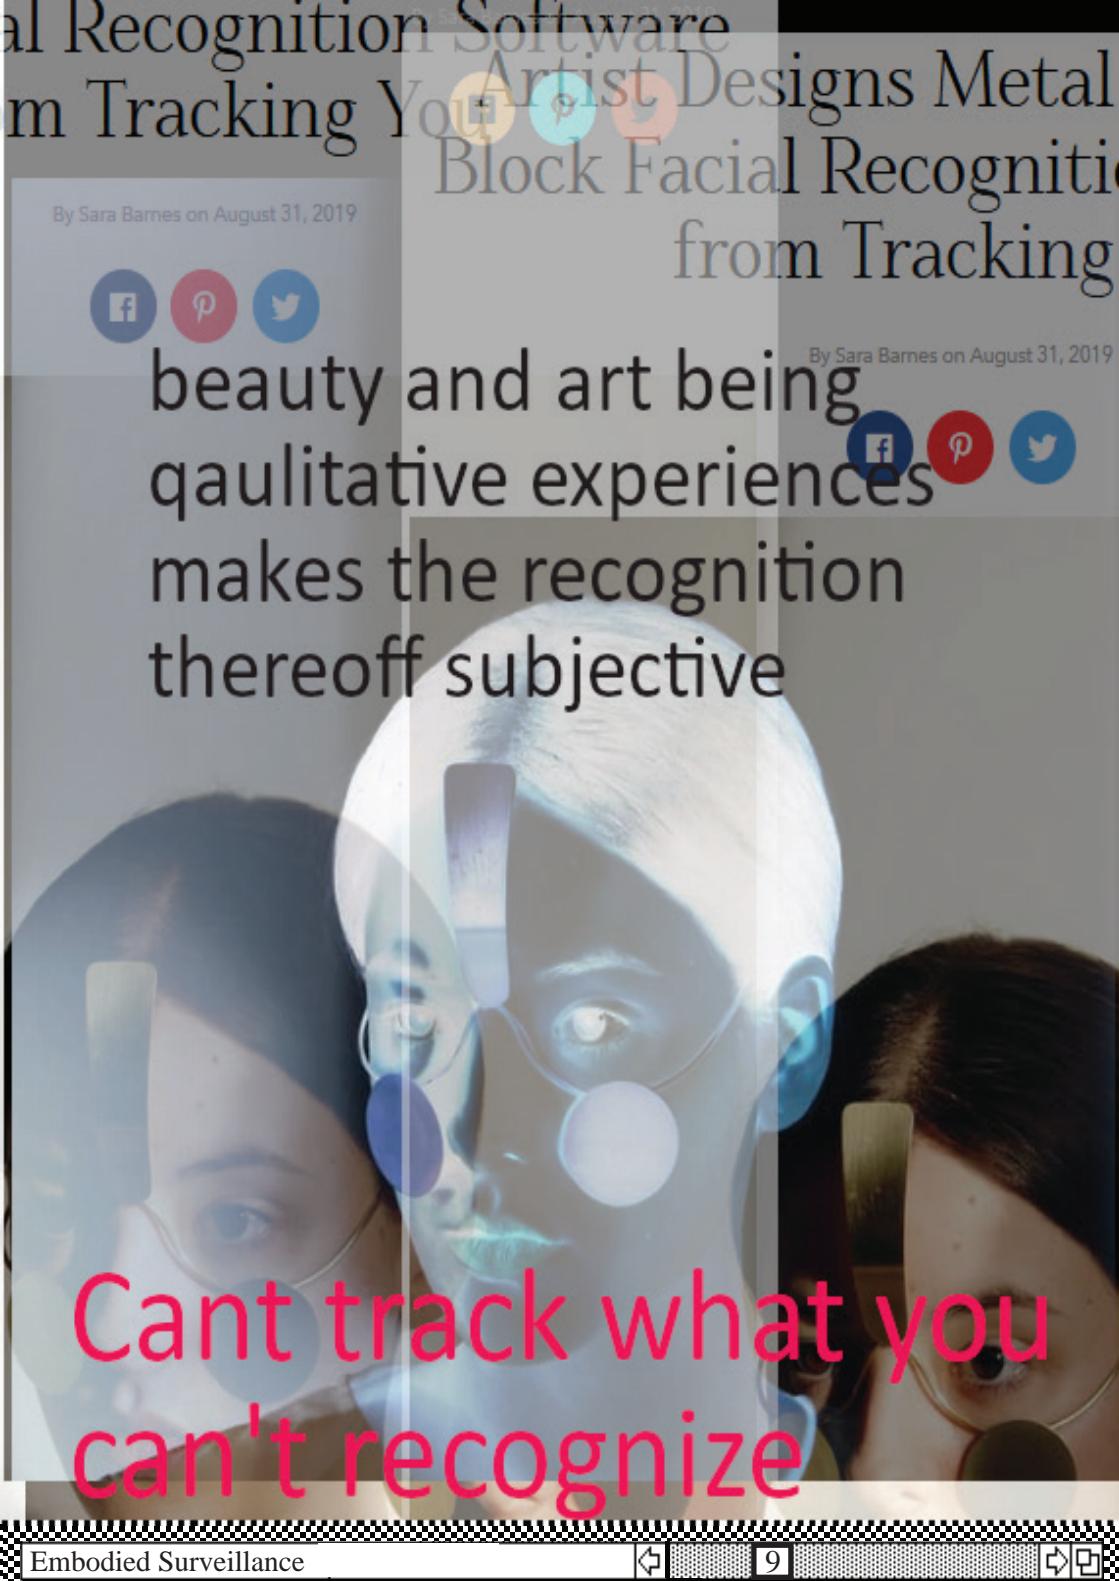

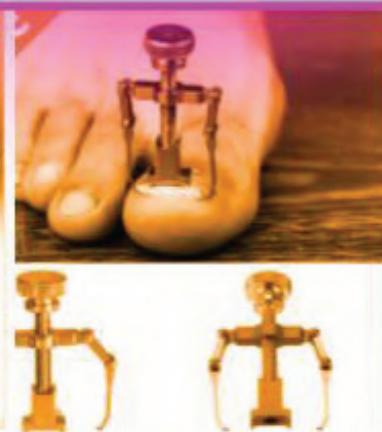

beauty and art being qualitative experiences makes the recognition thereof subjective

By Sara Barnes on August 31, 2019

Can't track what you can't recognize

i am realising i just spammed u a bit, but i am sending these gifs (contents) over, as additions to the content discourse on techno feminism. they are developed during my research project HELLO AND WELCOME TO THE INTERNET: R U ALSO LOST? where i created online meeting spaces on diverse platforms and had sharing therapies on how to be lost, assuming a stance that ontological uncertainty (including existential, metaphysical and geographical polysemic audio design) is a circumstance for digital hyperobjects. Continuing the techno feminist/posthuman movement, that our bodies are prosthetics of our agencies, and that there is queer empowerment to be performed in accepting your inconceivable digital presence as tool for an anti-essentialist movement

these are however just gifs, maybe you can use them.

maybe they no longer mean what they used to, or maybe they don't explain anything when they are not accompanied with our performance space. Either way, here u r.

TECH SURVEILLANCE, VIOLENCE, THE GENDERED BODY AND EMBODIED HARM'S

TECHNOLOGY HAS INCREASINGLY FACILITATED SURVEILLANCE OVER FEMALE PRESENTING BODIES, EXPANDING THE POSSIBILITIES OF LONG – LASTING, EMBODIED HARMS. IT HAS NOT ONLY ALLOWED FURTHER VICTIMIZATION OF VICTIMS OF SEXUAL VIOLENCE THROUGH THE RECORDING, OUTING AND SPREADING OF IMAGES OF SEXUAL ABUSE THROUGH SOCIAL MEDIA, BUT HAS ALSO EXPANDED THE POSSIBILITIES OF HARASSMENT (SEXUAL OR OTHERWISE) OF WOMEN IN DATING APPS, SEX WORKERS AND VICTIMS OF DOMESTIC VIOLENCE. TECH COMPANIES BELIEVE AI CAN SOLVE THE PROBLEM (?)

(((((((MAYBE THE ONLY SOLUTION IS NOT IN AI, BUT IN SHAPING TECHNOLOGY OURSELVES FOR RESISTANCE)))))))

LUCILA ROZAS URRUNAGA

Rape victim, 16, who spoke out after photos of her assault were spread online is trolled by sick internet copying the pose she collapsed

- Girl named Jada said in an interview on Tuesday that she was drug at a friend's party before pictures of the attack emerged online
- But trolls have copied her pose in the photos with the hashtag #jac

According to [Global Voices](#), three days after the Russian press covered Tsverkov's project, a online hive of scum and villainy on a 4Chan-esque Russian forum called Dvach began using the FindFace app to analyze photos of porn actresses. After finding a match, the hordes descended, attacking them on the popular Russian social media network, Vkontakte, and posting photos to friends and family members. The photos don't appear to limited to images of women from Russia, either. The woman in the above image appears to be an American college student.

@alpettymayo
Day 16 of quarantine:

I want to show you how the ferries in the harbour have all lined up outside my window. They've stopped taking refugees now. We've been told that the island of Lesvos will fill up quickly. Hundreds of thousands wait to cross over in Turkey, and there's more in the ports of Athens and by the borders of Macedonia. Even though most who register won't make it any further, everyone seems calm. I stare out at the sea. I wait for the water to erupt.

Many of the volunteers care more about the stray dogs running around the camp than they do about eating or sleeping well. We are seeking our own kind of refuge, but we are not refugees. There are fences and hi-vis vests to separate us from the refugees, those with brown faces who you will see on the news, who I will see standing across from me in the morning. I can shake their hands and read them stories and hide that we are all running from countries that we do not wish to belong to. The real crisis is in our inability to engage.

This morning I thought again of you, in your kitchen, where everything has its place. I thought of you watching television. I thought of you writing back to me. The people I have met here continue to battle in between ruins, among borders invisible to most. We use different lenses to define who you are in this struggle, structures and privileges that govern who gets to be seen and treated as human. Tomorrow, I will spend one of my last days here being skypeinterviewed inside my tent for money. I will see you soon, I guess. I will try not to ask you about money.

Internet Teapot - Coming Soon

This zine was collaboratively produced by 23 digital participants connecting from their #CoronaVirusQuarantines to take part in the experimental online *Algorithms of Late-Capitalism Online Zine Co-creation Workshop*.

The purpose of the workshop was for participants to critically engage with the role digital technology plays in our daily lives through re-contextualizing, de-coding & recoding internet found images, memes, tech news, and more through the creative process of remixing.

If you want to host the next issue of *Algorithms of Late-Capitalism* as an online/offline workshop contact internetteapot@gmail.com or visit www.internetteapot.com
